20. The new phone model is available in _____ quantities, so customers are rushing to buy it before it's sold out.
(A) limited (B) severe (C) positive (D) regular

三、學測文章綜合測驗 25 % (每題 2.5 分)

題組 1 (文意選填)

Research has proven that weather plays a part in our moods: Warmer temperatures and exposure to sunshine increase positive thinking, whereas cold, rainy days bring anxiety and fatigue. 21, many people believe that bad weather can reduce productivity and efficiency.

There is, however, a significant 22 between such beliefs and the actual effect of weather on people's performance at work. Using empirical data from laboratory experiments 23 observations of a mid-sized Japanese bank in real life, researchers find that weather conditions indeed influence a worker's focus. When the weather is bad, individuals tend to focus more on their work rather than thinking about activities they could 24 outside of work. But photos showing outdoor activities, such as sailing on a sunny day or walking in the woods, can greatly distract workers and thus 25 their productivity. The findings conclude that workers are actually most productive when the weather is lousy—and only if nothing reminds them of good weather.

- (A) gap (B) as well as (C) engage in (D) lower (E) Accordingly

題組 2 (克漏字)

Shoes are hugely important for protecting our feet, especially in places 26 Africa, where healthcare provision is limited. Unfortunately, shoes are not always readily available for people living in poverty, let alone shoes that are the right size. Almost as soon as a child receives shoes to wear, he/she is 27 to have grown out of them. Then the child has to make do with shoes that are too small. The Shoe That Grows, created by a charity called Because International, changes all this. It allows children to adjust their shoes' size as their feet grow. The innovative footwear resembles a 28 sandal and is made of leather straps and rubber soles, a material 29 to that used in tires. They come in two sizes, and can expand in three places. The straps on the heel and toe control the length of the shoe, while the two on either side allow for different widths. With this special 30, the shoes can "grow" up to five sizes and last for at least five years.

- C 26. (A) for (B) despite (C) like (D) with
 A 27. (A) likely (B) possible (C) maybe (D) like
 C 28. (A) impossible (B) difficult (C) common (D) exciting
 A 29. (A) similar (B) different (C) unique (D) domestic
 B 30. (A) pattern (B) design (C) device (D) defect

四、課文閱讀測驗 12.5 % (每題 2.5 分)

On a hilltop overlooking the 2011-tsunami hit Otsuchi Town in northeastern Japan, there is a white phone booth standing all alone in the wind. The lonely "wind phone" serves to connect family members to their departed loved ones who died in the tsunami that claimed 18,000 lives. People come to speak to those they have lost, to say the words they never got to say on that fateful day.

The idea for the wind phone was first brought forth by a Japanese garden designer named Itaru Sasaki, who was grieving over the death of his cousin in 2010, before the tsunami. Feeling that he needed a private space to help him navigate through the sorrow, Sasaki positioned a booth where he could "speak" to the dead relative. The booth he built housed only an old dial phone with a disconnected phone line. When he stepped into the booth, he could pick up the phone to call his cousin, telling him how he was, and how he missed him. Sasaki stated in an interview: "Because my thoughts couldn't be passed on through a regular phone line, I wanted them to be carried on the wind." Hence, the wind phone allows Sasaki to create a one-way conversation with deep, soulful personal meaning, and renders the grieving process more manageable for him.

Sasaki opened his wind phone to the public in 2011, after the devastating tsunami. News about the phone gradually spread, and the booth has become a bridge between the living and the dead. Phones resembling the wind phone have since been built around the world. Some were even set up to allow people to call their loved ones lost in the COVID-19 pandemic. Grieving is a natural mechanism for coping with loss of a loved one, and people grieve in various ways. For those who speak into the wind phone, hope is always there: They believe that their messages will—through some unknown way—reach the deceased.

31. What is the purpose of the wind phone mentioned in the article?

- B A) To allow people to make real phone calls to the deceased.
 B) To provide a private space for people to express their grief.

- C) To serve as a monument for those who died in natural disasters.
D) To record messages for future generations.

B 32. Why did Itaru Sasaki create the wind phone originally?

- A) To help people affected by the 2011 tsunami.
B) To communicate with his cousin who had passed away.
C) To experiment with a new garden design.
D) To study how grief affects human psychology.

A 33. How does the wind phone help those who use it?

- A) It helps make the grieving process more manageable.
B) It allows two-way communication with the deceased.
C) It plays pre-recorded comforting messages.
D) It connects callers to counselors for emotional support.

D 34. What inspired the spread of wind phones around the world?

- A) Their effectiveness in preventing grief-related illnesses.
B) The increasing popularity of dial phones as memorials.
C) Their ability to collect and preserve messages from the living.
D) The emotional impact of Sasaki's story and the 2011 tsunami.

C 35. According to the article, what do people who use the wind phone believe?

- A) Their messages will be stored for future reference.
B) The wind phone creates a stronger bond with their ancestors.
C) Their messages may somehow reach their deceased loved ones.
D) The phone helps them forget their sorrows entirely.

五、文法選擇 12.5 % (每題 2.5 分)

C 36. Water is important for survival, especially in places _____ clean water is hard to find.
